

# SPRAYED CONCRETE MAINTENANCE PRODUCTS

## PROTECTS, AIDS AND RESTORE

In addition to Normet's core admixture range for sprayed concrete, we offer a series of non-toxic and environmentally friendly products that protect, aid and restore your Normet equipment.

### PROTECT

#### TamCrete EasyClean

Sprayed concrete is never clean work. TamCrete EasyClean is a protective shield coating that should be sprayed onto all concrete pumps, spraying robots, batching plants and transmitters and other equipment prior to work commencing. TamCrete EasyClean stops cement laitance and rebound from bonding to steel and rubber surfaces, keeping your machine in a good, like-new condition after jet-washing.

### AID

#### TamCrete PLL

A concrete mix design can only go so far in helping concrete travel through rubber and steel hoses. TamCrete PLL is a pump and concrete delivery line primer that should be pumped ahead of your concrete, thereby creating a lubricating skin between pipe and concrete to aid pumping and eliminate blockages. For ease of use TamCrete PLL is supplied in easy to use dissolvable single dose sachets.

### RESTORE

#### TamCrete CR

Undoubtedly at times, residual concrete will harden in places and bond on items where it shouldn't. When this happens TamCrete CR, a hardened concrete remover can be applied to the area to assist in its removal. TamCrete CR is a gel like liquid that can be brushed or sprayed on to affected areas. The product then needs some time to work and should be left to penetrate and dissolve the concrete residual before being jet-washed off with water. This product is equipment and user-friendly.
