

## CORNER GUARDS

We supply various different types of corner guards, depending on your requirements. Our range includes...Standard , Heavy duty, Low profile (for more discreet protection) Quadrant (popular in high traffic areas), Perm-a-fix (for areas already damaged and difficult to attach to). Supplied in lengths up to 3 metres.

## CRASH RAILS

Manufactured using electropolished stainless steel in grades 304 or 316, these mid-wall crash rails offer a good form of wall protection, from being hit or scuffed from things like trolleys or forklifts. Supplied in lengths up to 6 metres.

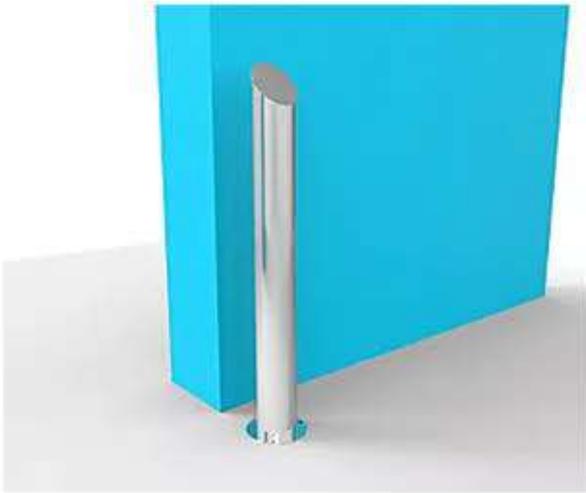

## CAPPINGS

Manufactured from electropolished stainless steel in grades 304 or 316, Options available are  
> Standard (flat on top)  
> Peaked (helps deter people from using the wall as a shelf)  
> Rounded (smooth rounded corners)

## JAMBING

Jambing can provide good protection at the ends of walls and around doors. It fixes onto fixing brackets, offering a shiny surface that can be easily cleaned. Made from electropolished stainless steel in grades 304 or 316.

## BOLLARDS

Stainless Steel bollards are ideal for industrial use to protect walls or stock from being hit by forklifts, trolleys or pallet trucks. The bollards can either be bolted to the existing floor or sunk into the ground.

## CRASH RAILS

Our low wall crash rails are ideal for use in industrial warehouses to add protection from vehicles and pallet trucks. They are also perfect for surrounding blocked off areas where product stock is held. Rails are either bolted onto the surface of the floor or, for extra strength, they can be sunk into the ground.

## KERBING

Stainless steel kerbing is an ideal product for creating a hygienic barrier between the wall and the floor in places such as food factories and other industrial buildings, where a high level of hygiene is important. Our range of Kerbs allows for use in both new build or in retro fit situations.

## GOAL POSTS

Protect around entrances and exits from impact damage with our goal post style bollards made from stainless steel! As the name suggests, they look just like goal posts and offer protection around the entire of the opening. Widths and heights fabricated to fit around the opening. Goal post protection can either be bolted to the existing floor or sunk into the ground.
