# THE arch**I**tecture RANGE

**MAXIMISE VERSATILITY  
AND DESIGN CHOICE**

**WIDE VARIETY OF COLOURS,  
STYLES AND TEXTURES**

**TRADITIONAL TO  
ULTRA-MODERN**

The choice of brick is one of the biggest factors in determining the look of your project, so specifying the right product is absolutely key. That's why the I-Range has been structured to **maximise versatility and design choice**.

Each of the brick styles within the range have been especially chosen to help architects and specifiers achieve the desired aesthetic for their product.

Comprising more than **100 bricks in a wide range of colours, styles and textures**, the I-Range encapsulates Ibstock's sector-leading product offering for architects and specifiers.

The I-Range consists of a wide variety of different brick types, from wirecut to stock, waterstruck to genuine handmade, meaning you are sure to find the right brick, whatever your design style – be it **traditional or ultra-modern**.

To make it easier to select the right bricks for your projects, we have presented our I-Range by colour and also by style, streamlining the process by which you find the design style that best suits your project.

# THE variety RANGE

Of the many factors that have bearing on a building's aesthetic impact, none is more significant than colour. Whether helping a building to blend in with its surrounding vernacular, or ensuring it stands out from the crowd, choosing the right colour for your brick is an essential consideration for any project.

# THE variety RANGE

Waterstruck bricks are manufactured in a similar way to stock bricks but are released from their moulds using water instead of sand. This creates an attractive, unique texture to the face of the bricks giving them a rustic appearance that is popular in both residential and commercial projects alike.

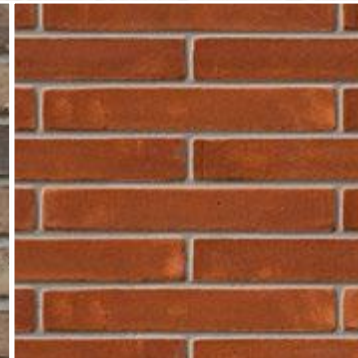

WATERSTRUCKS

# THE variety RANGE

The use of longer, thinner format bricks has grown increasingly popular in modern architectural design over the past few years. These elongated formats accentuate building lines in modern façades and draw the eye to building details.

## CONCEPT TO BUILD

We are proud to offer a range of value-added services alongside our broad product portfolio, designed to support your project from **concept to build**. These include our design and technical advisory service where our CAD-trained Specification team will create your project in BIM, a next day samples service and our London based I-STUDIO meeting and collaboration space.

**CLICK HERE TO SEE WHAT OUR DESIGN  
AND TECHNICAL SERVICE OFFERS**

## SECTOR-LEADING TRAINING AND CPD PROVISION

From in-depth know-how and technical guidance to **a sector-leading training and CPD provision**, Ibstock's range of Design & Technical services have been especially configured to ensure architects and specifiers have access to all the support they'll need for every stage of their project journey.

# THE specification RANGE

## MECHSLIP

Our BBA approved MechSlip leads the field when it comes to safety and performance – and you don't have to compromise on design, either.

MechSlip brings you the freedom to design beautiful architecture. You can choose to incorporate popular design features from deep or shallow brick reveals to projecting brickwork patterns. From unlimited applications of vertical brick coursing to traditional or more unusual bond patterns.

Whichever you choose, it's been certified by the BBA for use in the MechSlip system.

The entire I-Range is fully compatible with our MechSlip system.

**Castle Park View, Bristol**  
MechSlip with Ivanhoe Katrina bricks

## NEXUS

Our BBA approved range of Nexus brick-faced soffit and lintel systems make modern brick-faced soffits and lintels achievable and easy-to-install – all with a safety guarantee.

These aesthetically pleasing features pose complex engineering issues, as these areas of brick must be held in place but with the necessary supporting steelwork remaining unseen.

To meet this challenge, Ibstock Kevington and Ancon, two of the UK's foremost innovators in prefabricated brickwork manufacture and support, created the NEXUS range of advanced lightweight solutions.

The entire I-Range is fully compatible with our Nexus systems.

**Muirfield Community Centre, Scotland**  
NEXUS systems with Ivanhoe Cream Original bricks

## PRECAST

Our vast range of brick-faced precast products, including Lintels, Arches and Panels can be manufactured using the any brick from The I-Range.

Manufactured to specification in one of our specialist facilities and delivered direct to site, our lightweight precast range couldn't be easier to handle and install, meaning you don't have to compromise on the overall look and feel of your project. Your entire project can be striking, seamless brick.

**Brighton Arches, Brighton**  
Precast Arches with Cheddar Red bricks

## BRICK SLIPS

Demand for Brick Slips for internal and external use has grown significantly in recent years.

Brick Slips offer myriad exciting design possibilities in both internal residential and commercial settings. They can add real charm, character and ambience to a living room, kitchen, café or bar - creating impactful design statements.

They also guarantee safety, longevity and a timeless aesthetic to external buildings. An increasing number of clients desire a brick finish on a large scale, mid and high rise developments and brick slips, combined with our Nexus, MechSlip and Precast solutions opens up almost endless design and build possibilities.

# THE sustaInable RANGE

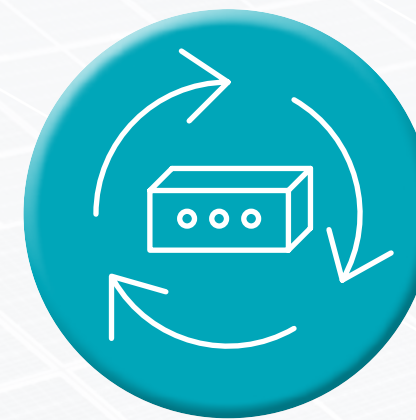

**BRICK - A TRULY  
SUSTAINABLE MATERIAL**

**150+  
YEAR LIFECYCLE**

**LOW EMBODIED CARBON  
OVER LIFETIME**

**RECYCLABLE WHEN THE  
TIME COMES**

Sustainability is a key consideration when specifying materials for a project.

We believe **brick is the ultimate sustainable material**. Uniquely beautiful and long lasting, yet decidedly low maintenance, brick built buildings are proven to stand the test of time, delivering significant aesthetic appeal for generation after generation.

With a **150+ year lifecycle**, brick has one of the **lowest embodied carbon** of any building material over the course of its life-time, and are **totally recyclable when the time comes** – a key tenet of the circular economy to which the country is aspiring.
