DACHFIX® STEEL Channels

For standard facade drainage.

Facade drainage

The HAURATON DACHFIX channel range covers all installation situations with the best solutions. Moisture should never be allowed into a building through external areas such as doors and facades. HAURATON products ensure the protection. The channels meet all relevant regulations for facade drainage and provide the following benefits:

- large volumes of rainwater drained quickly and safely
- backflow reserve for sudden heavy rainfall
- avoidance of puddles forming around facade
- indoor areas safeguarded from heavy rainfall

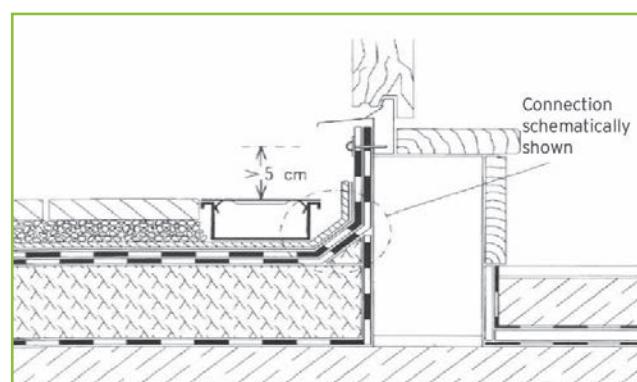

Channels should not be lifted by strong winds and must prevent surface ponding. In many regions also snow, ice and slush requires handling efficiently. Heat permeating through doorways can quickly melt snow and ice, creating high volumes of surface water. This may be contained by remaining snow and ice. The DACHFIX range of facade drainage meets all these challenges and more, providing continuous and efficient surface drainage. Correct channel sizing to accommodate for anticipated surface water volumes is provided through comprehensive technical support available from HAURATON.

High architectural standards are maintained through a wide variety of grating designs and combinations: in both galvanised and stainless steel.

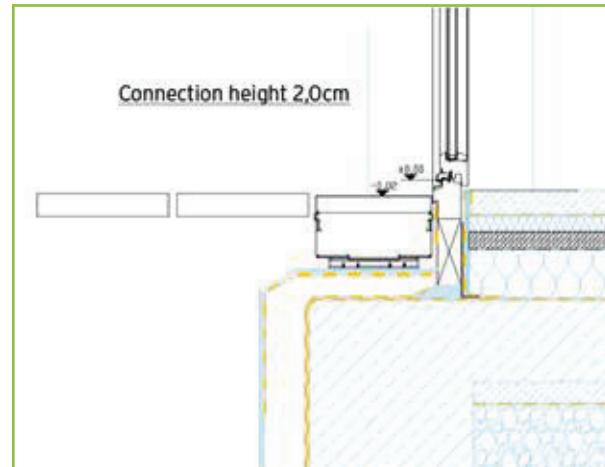

Well-known practical requirements

Height differences from 15 to 0 cm are familiar in the area of building drainage. Without a drainage system a level difference of 15 cm is required. This can be reduced to 5 cm with the use of DACHFIX STEEL. For safety reasons, many buildings are planned with a 5-cm level difference between indoor areas and water-bearing levels. However, this means that these buildings are not barrier-free accessible.

Practical requirements for barrier-free entrances

In practice, a 2 cm-high threshold is often accepted as barrier-free. However, in many public buildings a totally level surface (zero level) is used for handicapped-accessible and barrier-free access. To achieve this, entrances, exits and adjacent surfaces must be precisely constructed with no height differences. DACHFIX STEEL channels can meet both installation scenarios.

Accessibility

Barrier-free entrance: Through precise height adjustment to the floor, DACHFIX STEEL can be fully adapted to suit any environment. HAURATON meets the regulations, high standards and expectations of architects and planners regarding design of barrier-free buildings.

Standard entrance

Particularly essential for people with disabilities
no full stop needed

DACHFIX®STEEL Channels

The right channel for every installation situation.

Typical on-site installation examples

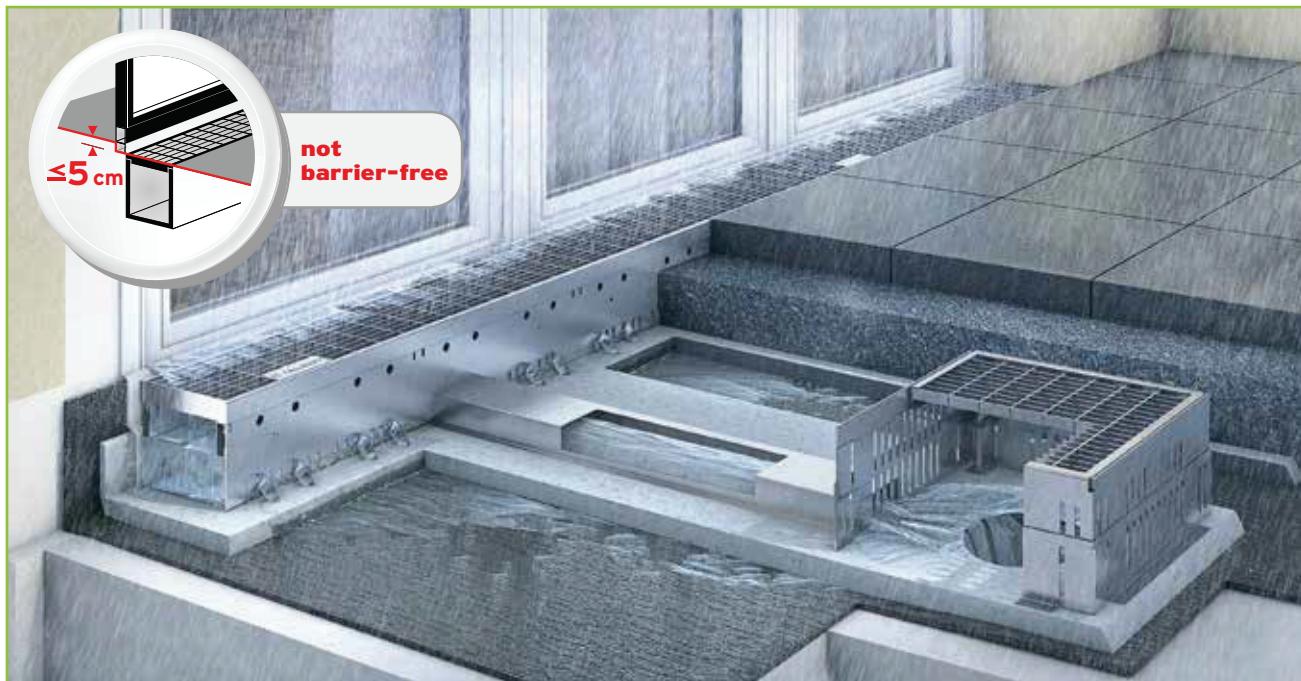

The DACHFIX STEEL channel range covers all standard installation situations and provides the best solution for every purpose.

Important for all installation situations: special attention to height level

If the channels are not connected to the wastewater pipe (installation situations A + B), a level difference of 5 cm between indoor areas and water-bearing levels should be observed. These buildings are not barrier-free accessible. In order to make entrances with a 2-cm difference in level or barrier-free (0 cm), a direct connection to the wastewater drainage system ensures reliable drainage (see installation situations C - E).

Installation situation A - Drainage via cross-intersection channel and DACHFIX®POINT

- Minimal overall construction, eg. roof terraces (no permeability).
- Drainage of water over a damp-proof-membrane through DACHFIX POINT.
- DACHFIX STEEL channel is connected to DACHFIX POINT via the cross-intersection channel. This ensures continuous drainage even when the roof structure is obstructed by fine particles and infiltration is reduced.

Installation situation B - Drainage without pipe connection to channel, 5 cm threshold

- Solution for reveal area with exit threshold.
- Channels are perforated without pipe connection.
- The water percolates underground.
- Channels installed with permeable concrete.

DACHFIX® STEEL Channels

The right channel for every installation situation.

Installation situation C - Drainage via channel with vertical pipe connection, level entrance (0 cm)

- Solution for reveal area without substructure.
- Channels are perforated. Some of the water is percolated underground.

- Channels installed with permeable concrete.
- Direct connection of channel to wastewater drainage system.

Installation situations D + E - Drainage via drain box, horizontal & vertical connection

- Solutions for a connection at the substructure reveal area with minimal overall construction.
- Channels are perforated. Some of the water percolates underground.
- Channels installed with permeable concrete.
- Direct connection of DACHFIX drain box to wastewater drainage system.

DACHFIX® STEEL Channels

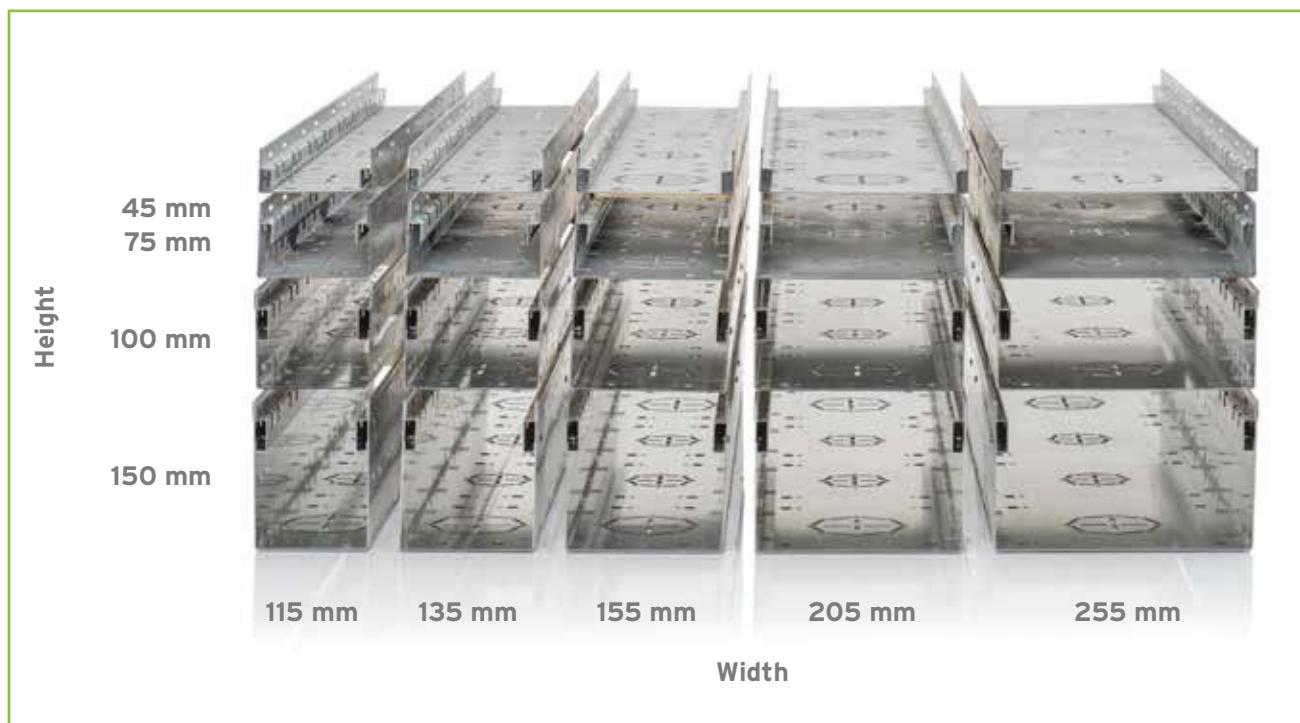

The right channel for every installation situation.

NEW

Always the right channel for every installation application

DACHFIX STEEL channels were specifically developed for all practical installation applications. A wide range, with 5 widths each in 4 heights, covers project requirements and provides reliable drainage and effective splash-water protection in every case.

- 5 widths (115, 135, 155, 205, 255 mm) each in 4 heights (45, 75, 100, 150 mm)
- the right channel for every application
- large channel widths to capture splash water
- solution for reveal area without substructure
- perforations in channel base for percolation of subsurface water
- channels installed with permeable concrete
- wastewater pipe connection direct to channel
- channels are perforated and connected to DACHFIX drain box via vertical connection

The scope of design is created by the wide range of different grating options.

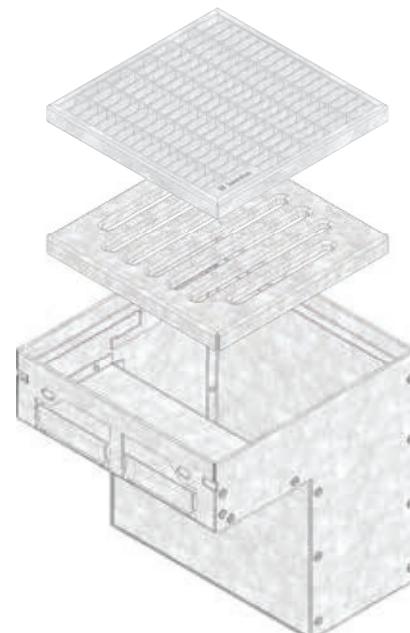

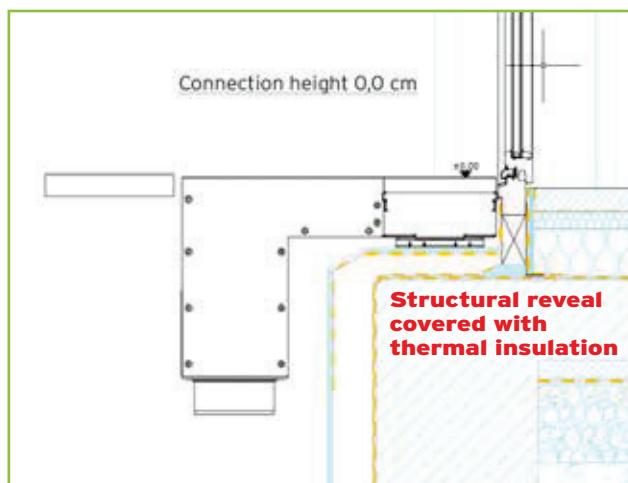

Whether a slotted, mesh, perforated or longitudinal grating - the product range always provides the right solution.

Unique: The DACHFIX® drain box

Reveals are provided with thermal insulation and therefore require drainage channels with shallow inverts. In this case there is no possibility for a positive pipe connection (vertical or horizontal).

The DACHFIX drain box sits on top of the protruding insulation board to provide positive connection to the channel and carry water to a discharge point beyond the structure; with the option for vertical or horizontal pipe connection at least 15 cm lower than the channel invert.

- allows a vertical or horizontal connection with substructure areas (reveal, thermal insulation)
- can be installed with 25 x 25 cm standard tiles without being cut
- 2 drain box designs are compatible with all DACHFIX STEEL channels
- matching gratings provide uniform appearance with DACHFIX STEEL channels

DACHFIX®STEEL Channels

Application areas for DACHFIX®STEEL Channels.

Security in planning and implementation

DACHFIX STEEL channels are especially developed for reliable and safe drainage of facades and flat roofs. The channels permanently protect buildings from standing or pressurised water while enabling entrances and passages to be made accessible.

- wide variety of channels with different widths and heights
- cover all standard installation situations
- implementation in accordance with standards and guidelines
- wide range of gratings for design flexibility
- hydraulic calculation provided by HAURATON Project Management Team

Application areas

- facades
- roof terraces
- flat roofs
- floor areas
- substructured reveal areas

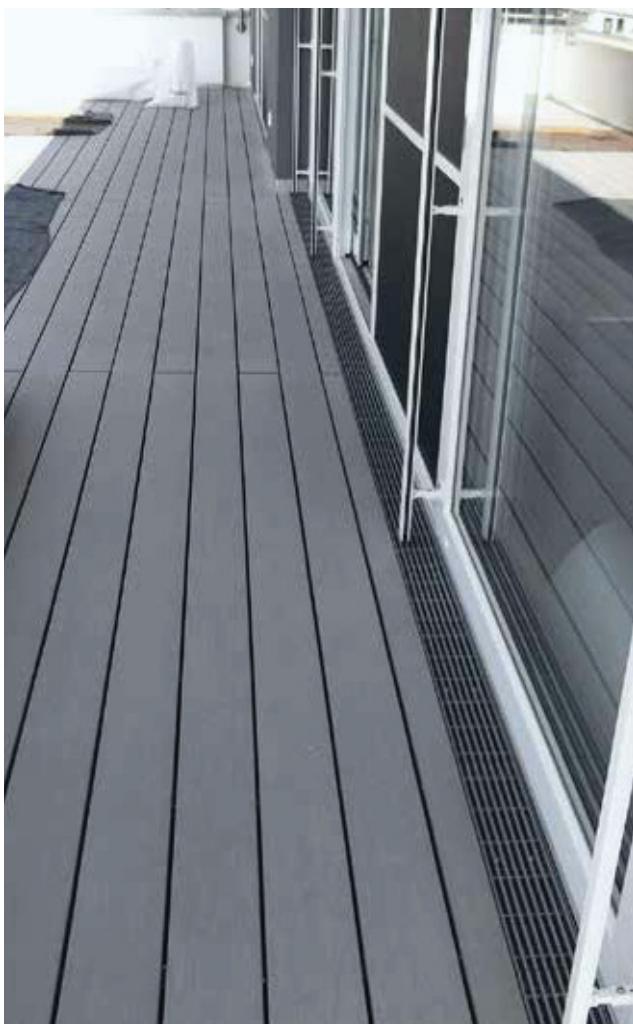

Residential area, Sindelfingen

Adalbert-Stifter-School, Nuremberg

Penthouse, Wiehl

Leonardo Royal Hotel, Munich

The benefits of DACHFIX®STEEL Channels

One Product Range for all Installation Situations

- five widths: 115 mm, 135 mm, 155 mm, 205 mm and 255 mm
- four heights: 45 mm, 75 mm, 100 mm and 150 mm
- accommodates large volume of water/melt water

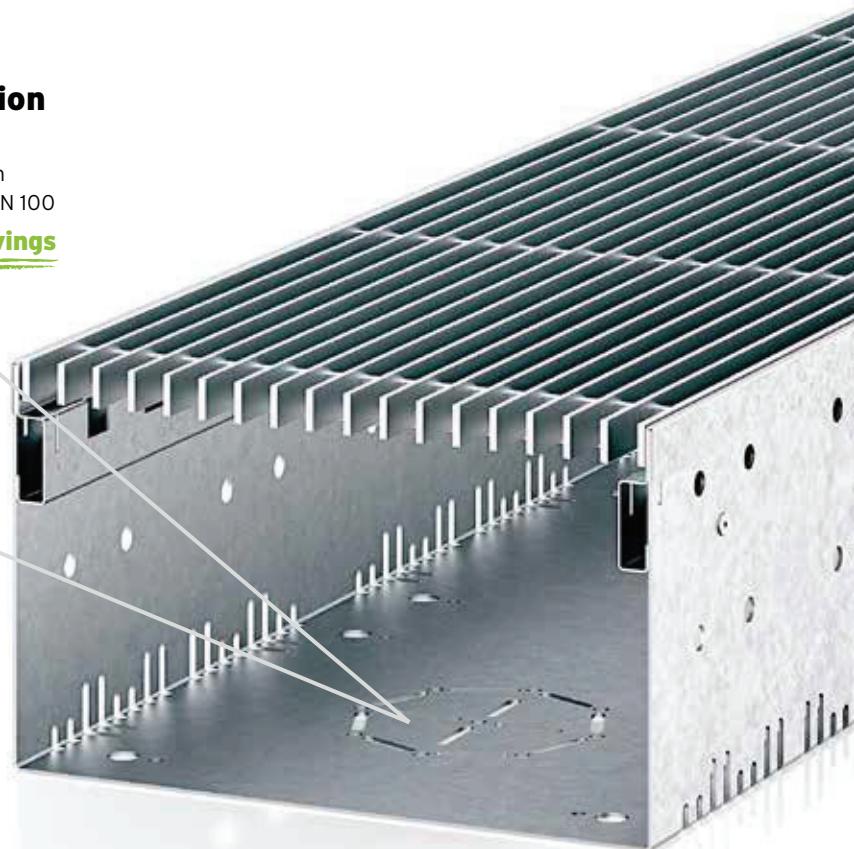

= Flexibility / Security

Removable Section in Base

- easier on-site connection
- connection: DN 70 and DN 100

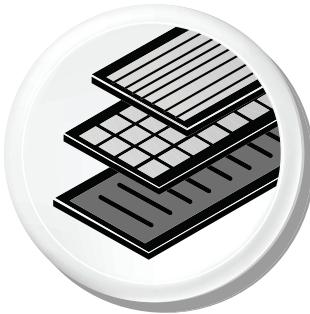

= Flexibility/Cost Savings

Practical Height Adjustment

- easy adjustment on uneven surfaces
- simple handling with 2 set screws
- placeable at several positions in the channel

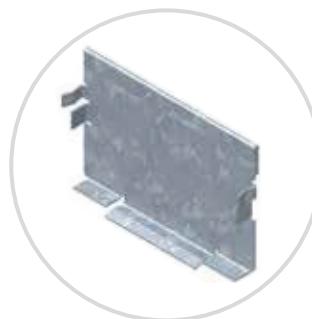

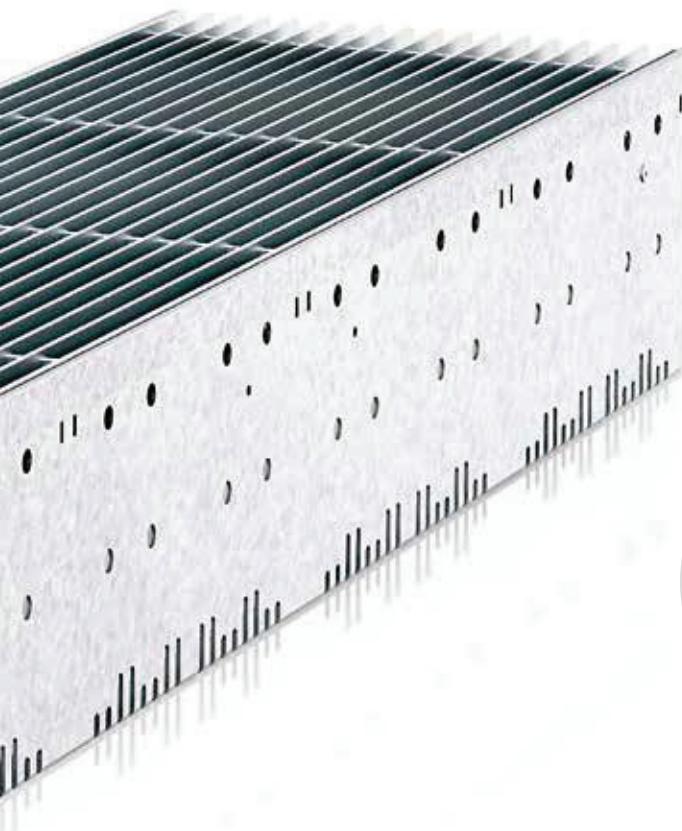

= Flexibility

NEW

Numerous Grating Options

- made of recycled composite, galvanised steel, stainless steel
- aesthetic mesh and longitudinal gratings
- customised gratings available

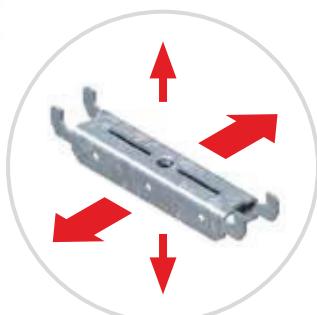

= Flexibility

Unique End Cap

- easy to fix with clip function

= Cost Savings

Special Locking Handle System

- locking handle for:
 - easy connection of channel elements
 - additional fixing option of grating

= Security

Easy Connection Options

- direct connection via removable section in base (DN 70 + DN 100)
- drain box outlet in substructure; vertical or horizontal connection
- via cross-intersection channel to DACHFIX®POINT

= Cost Savings / Flexibility / Security

DACHFIX® STEEL Channels

Reliable backwater reserve for terraces, facades and flat roofs.

DACHFIX Channels are suitable for pedestrian traffic and wheelchair access.

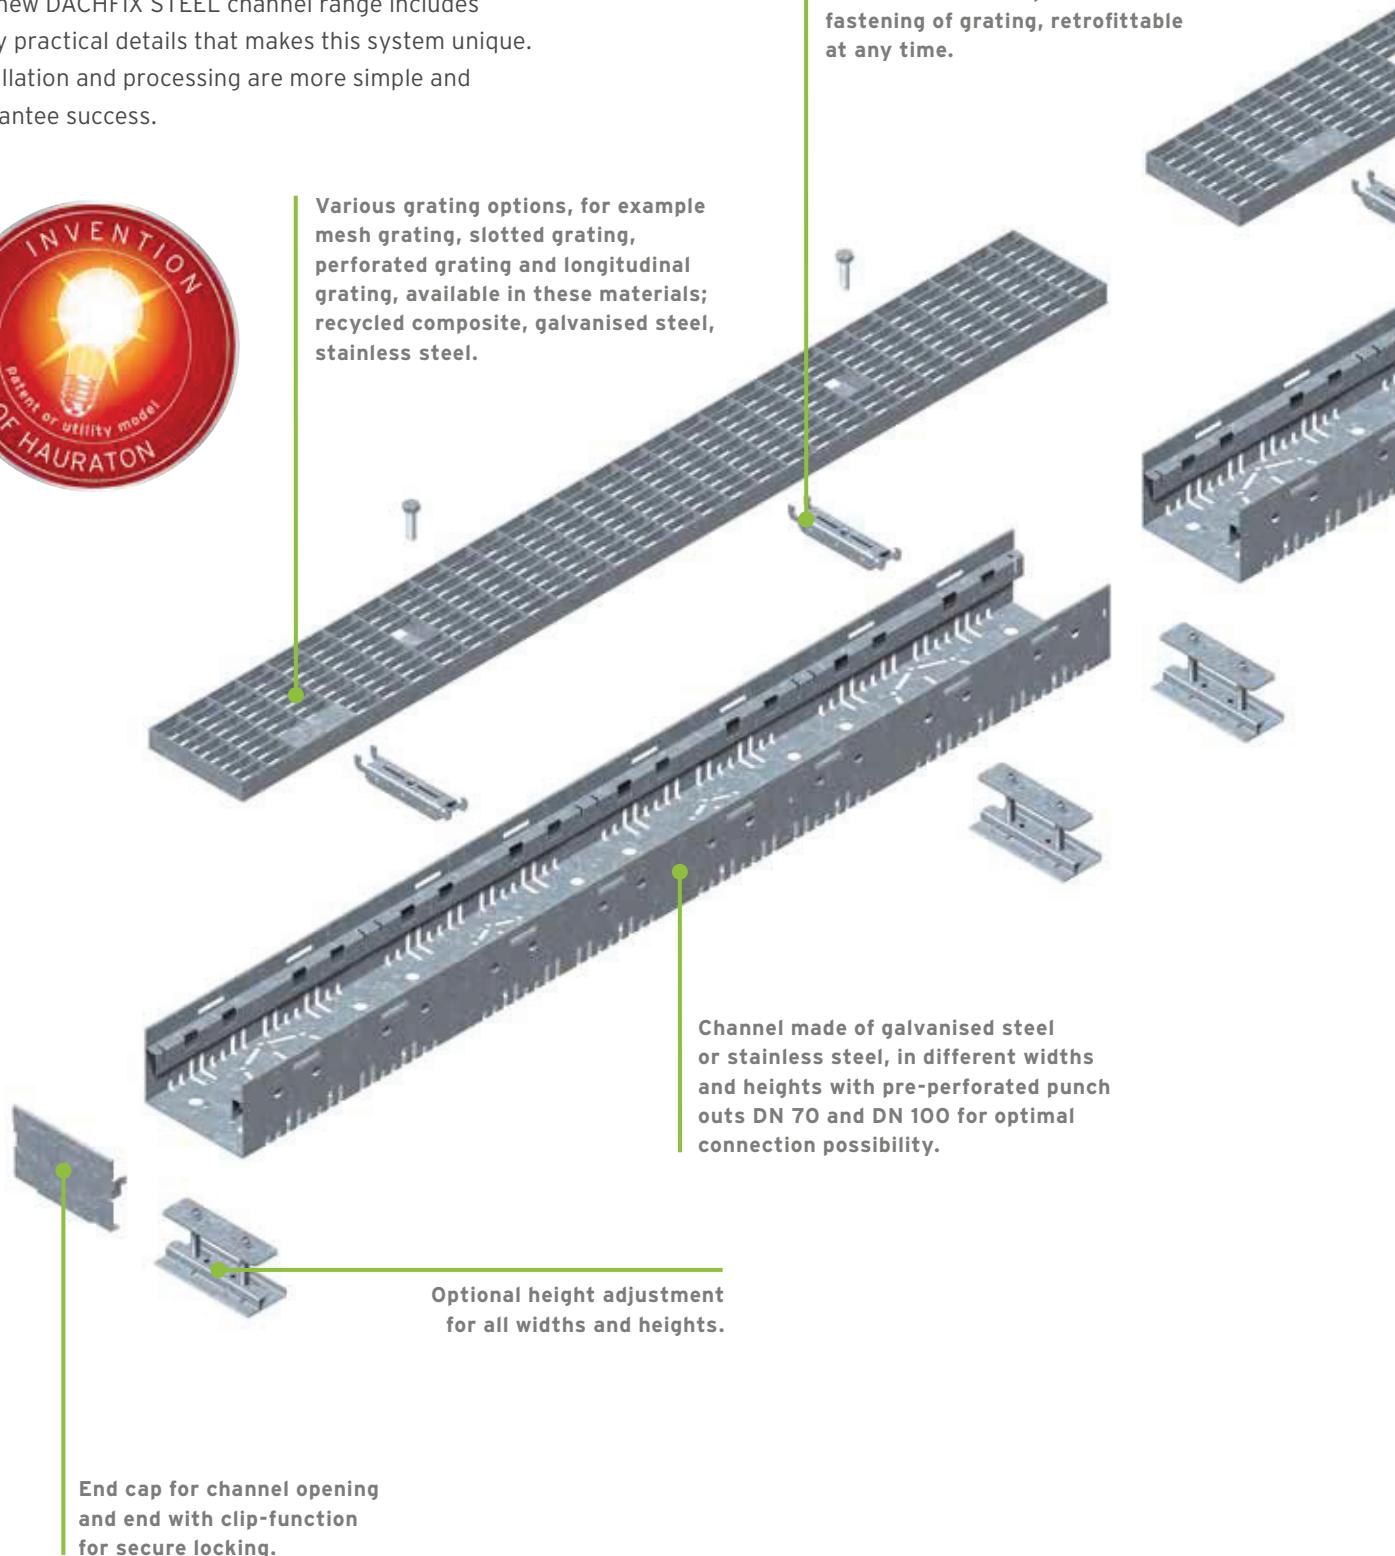

New drainage system

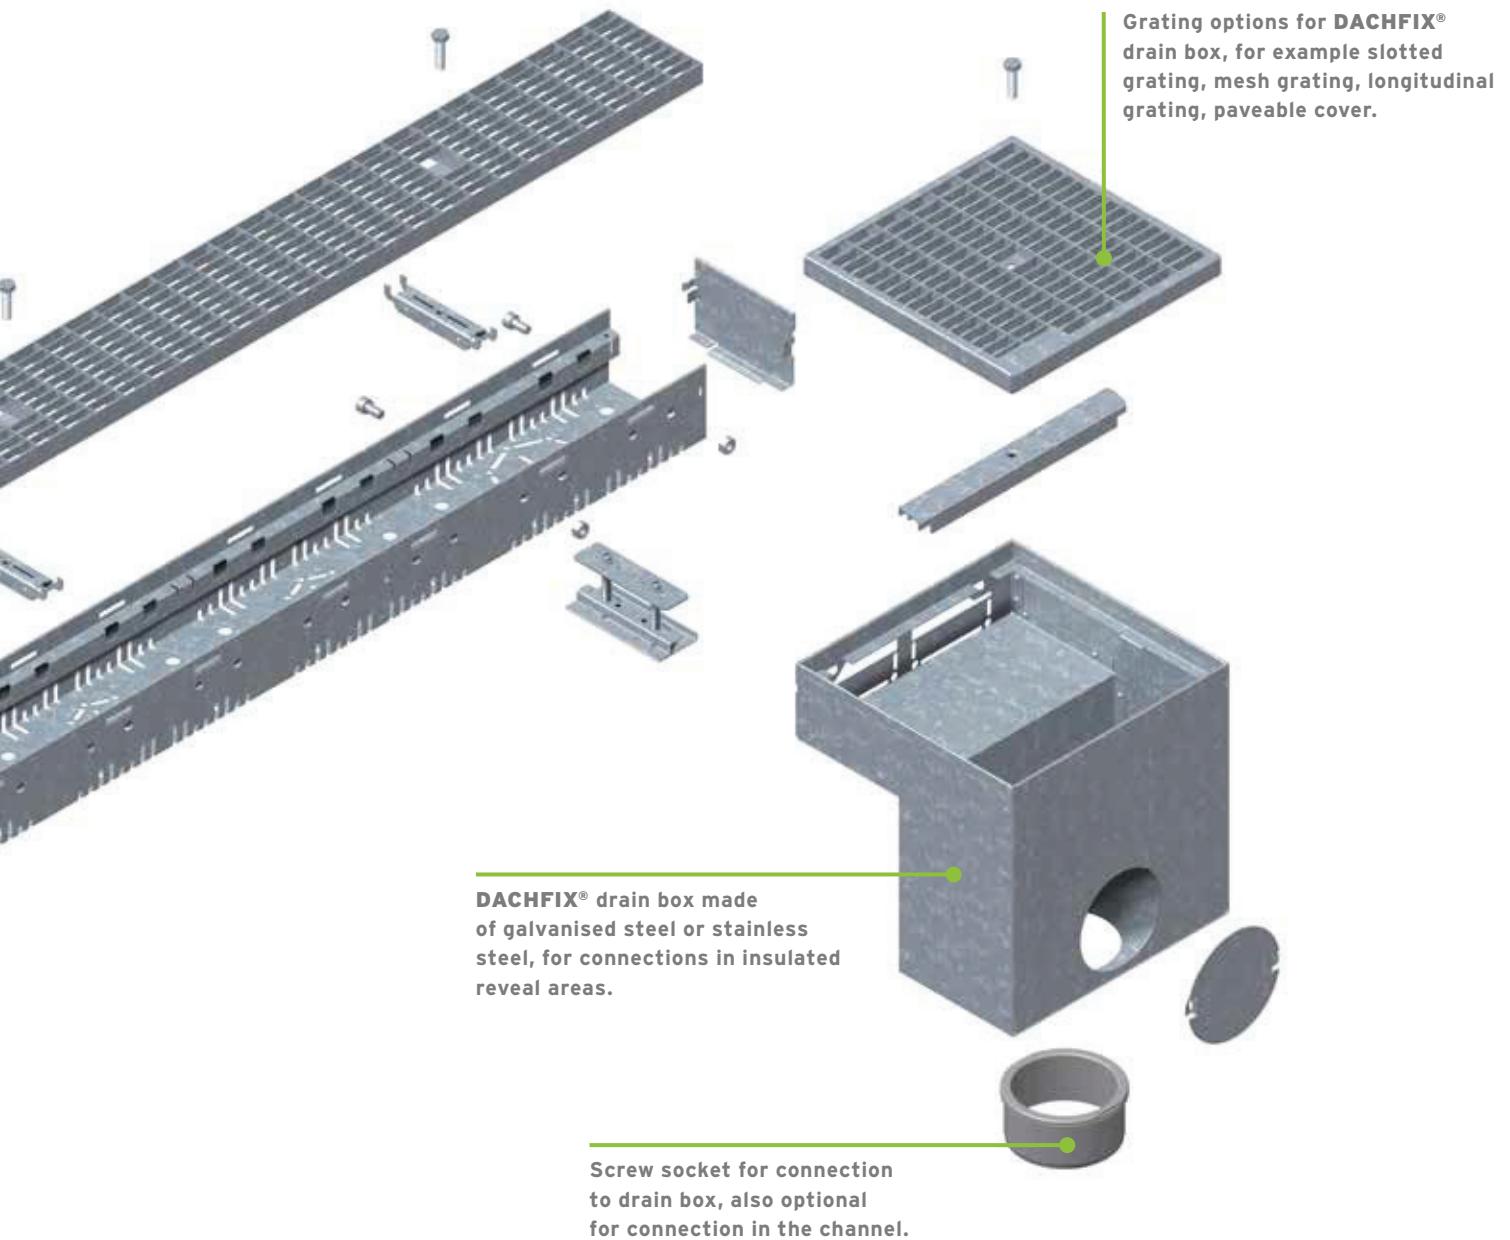

The new DACHFIX STEEL channel range includes many practical details that makes this system unique. Installation and processing are more simple and guarantee success.

Various grating options, for example mesh grating, slotted grating, perforated grating and longitudinal grating, available in these materials; recycled composite, galvanised steel, stainless steel.

Locking system for easy connection of channel unit or optional screw fastening of grating, retrofittable at any time.
